

# YouTube VIDEO INFORMATION EVALUATION SYSTEM

Chien Yuan Chang 12/17/2021

# 5 BILLION VIDEOS

are watched on Youtube every single day

300 HOURS

\$3-\$5

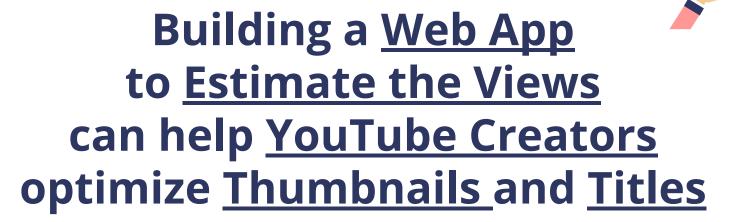

of video are uploaded every minute

are earned per 1000 video views

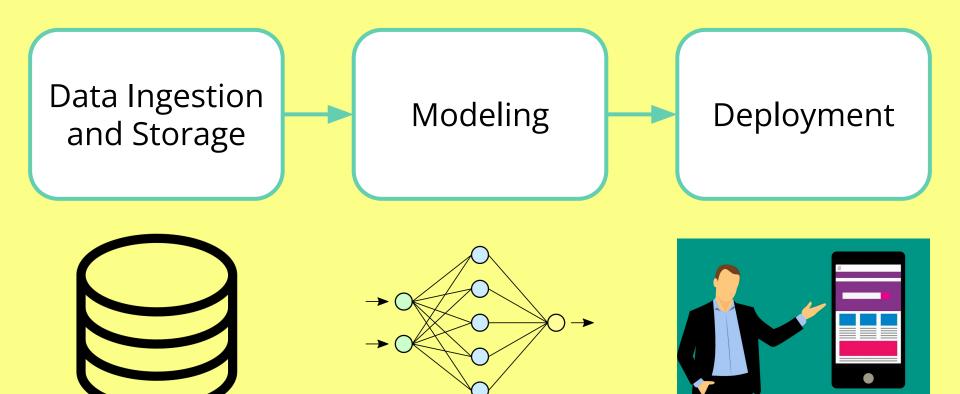

# MORE VIEWS MORE REVENUE

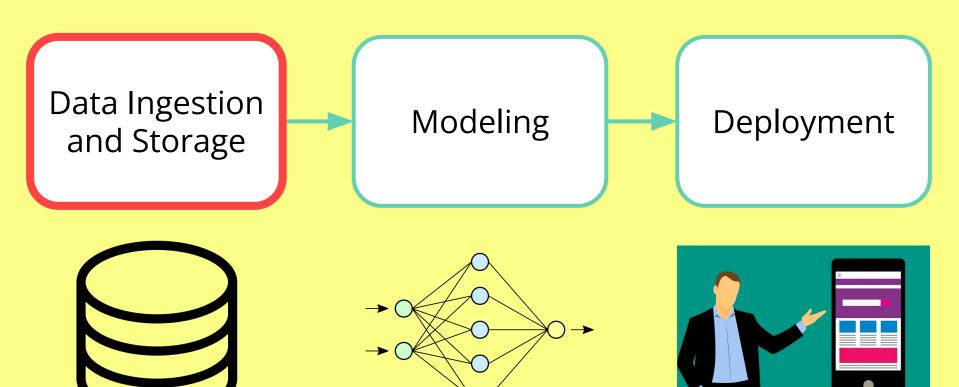

# **WORKFLOW**

# **WORKFLOW**

#### **YOUTUBE DATA - FIVE BRANCHES**

Image Data: Thumbnail

**Numerical and Categorical Data:** 

View Count, Published Time, Duration, Category, Definition, Dimension, Made for kids, Subscriber Count, Channel Country and Channel video Count

Target:

Log 10 of Daily Views of the Video

Text Data: Title Text Data: Tags Text Data: Description

#### **DATA FLOW DIAGRAM - LOCAL**

1. Request the list, detailed information of the videos and channels of 4,200 videos among 14 categories by YouTube Data API once a day due YouTube Local MongoDB to the api quota Data 2. Store the information videos and channels **Python** 4. Store images into **Thumbnails** 3. Request the images of thumbnails by url and video id on **Local Drive** i.ytimg.com

#### **DATA FLOW DIAGRAM - CLOUD**

YouTube Data

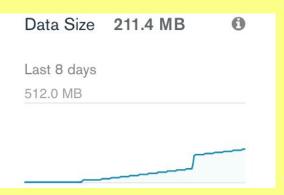

> Request the list and the detailed information of the videos and channels of 1,400 videos among 14 categories by YouTube Data API automatically every 8 hours due to the api quota

Amazon Lambda (Python)

Send and Store

MongoDB Atlas Retrieve

| Symmetry | Production | Table | Tabl

Thumbnails on i.ytimg.com

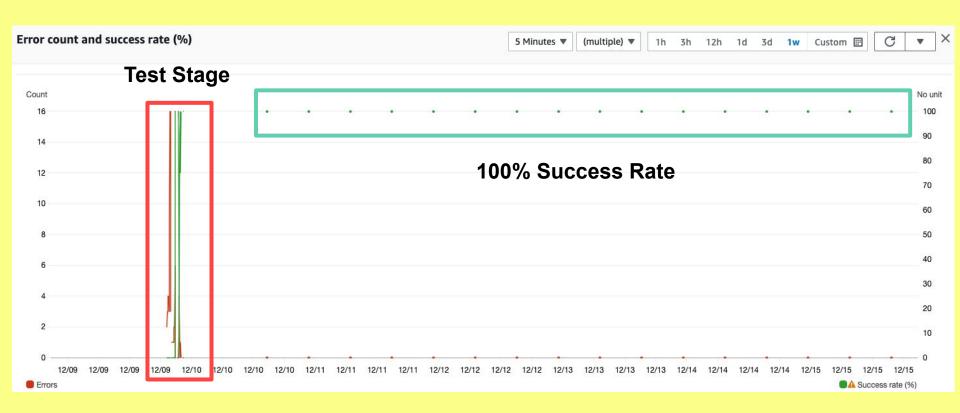

Request the images of thumbnails by url and video id before training models

Google Colab (Python)

Store images

Google Drive

#### **AMAZON LAMBDA - SUCCESS RATE**

#### **MONGODB ATLAS**

Data Size 211.4 MB

0

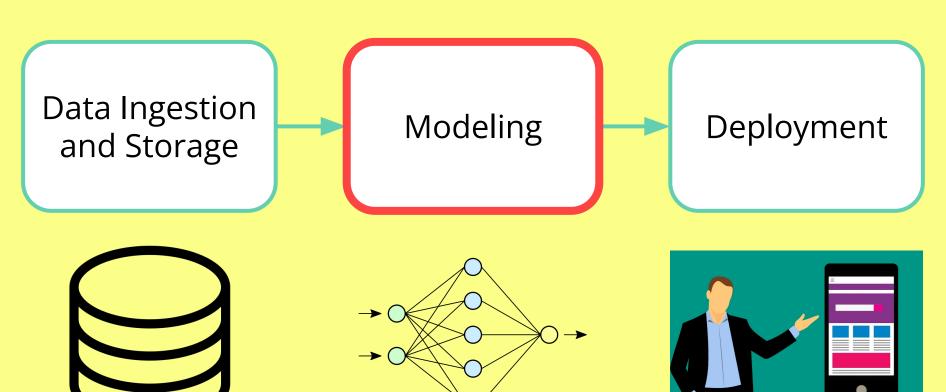

Last 8 days

512.0 MB

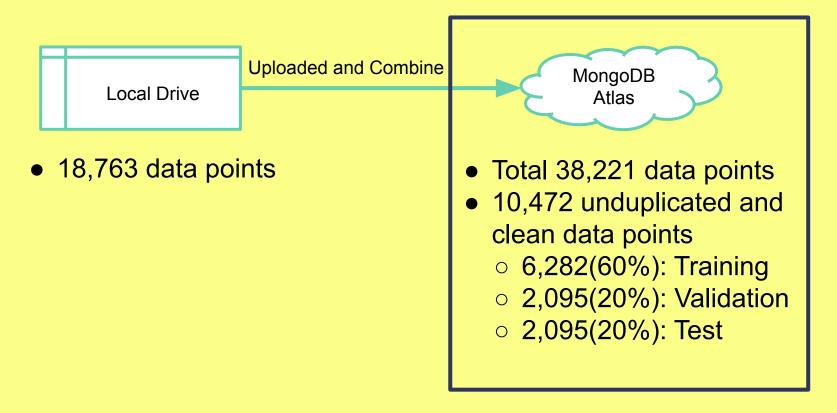

**Stable Accumulation** 

Uploaded and combined with local data

# **WORKFLOW**

#### **DATA FOR MODEL TRAINING**

#### **BASELINE MODEL - LINEAR REGRESSION**

#### **Feature Branches**

Numerical and Categorical Video Information

→ One-hot Encoding and Standardization

**Thumbnails** 

→ Resize, Rescale and SVD

Title

→ NLP, Tokenizer and PCA

Tag

→ NLP, Tokenizer and PCA

**Description** 

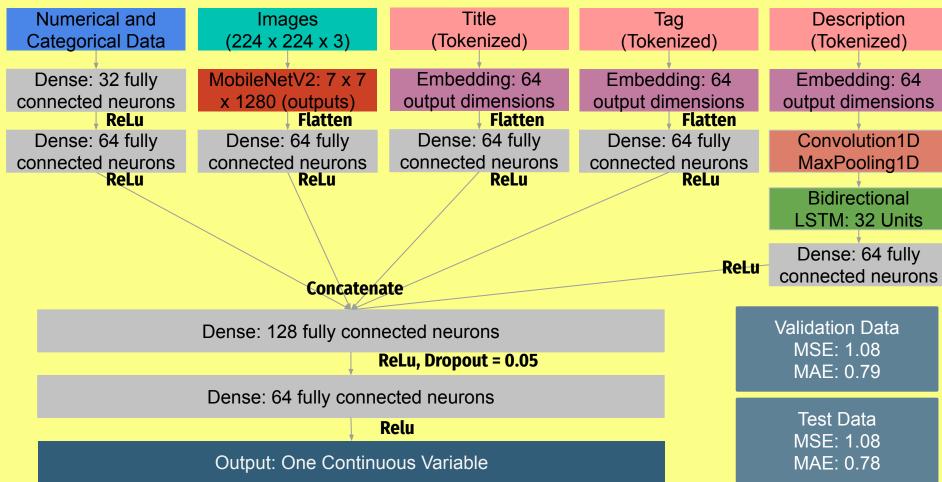

→ NLP, Tokenizer and PCA

Target:
Log 10 of Daily
Views of the Video

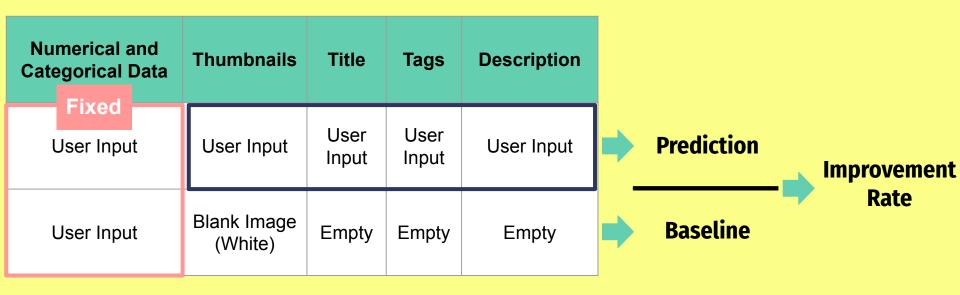

Validation Data MSE > 1.57 MAE > 0.96

#### FINAL MODEL - NEURAL NETWORK

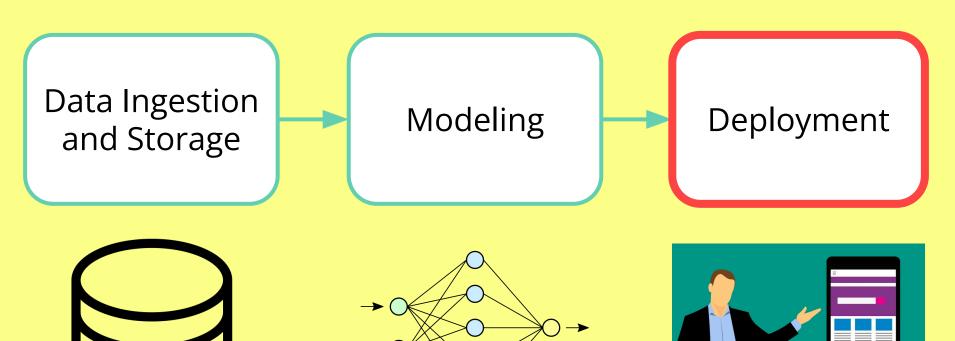

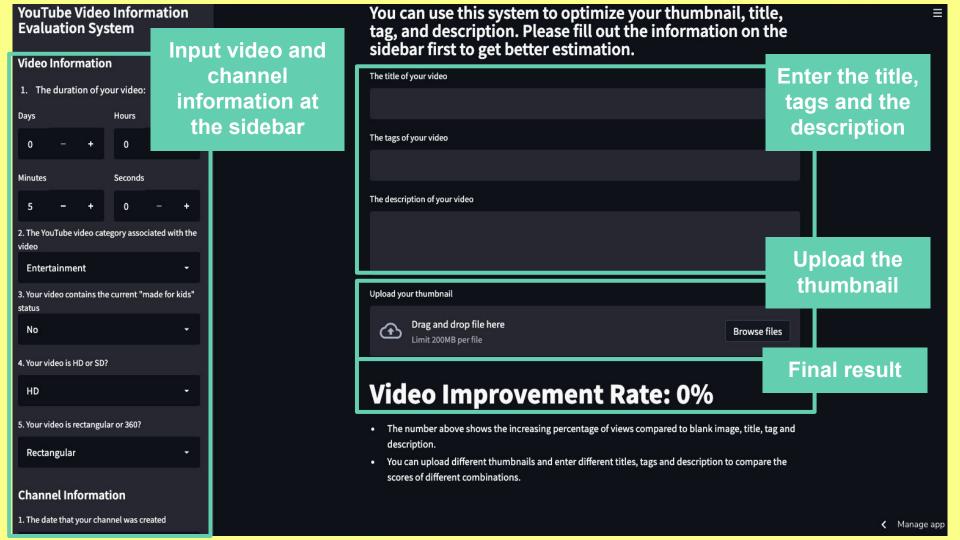

## FINAL RESULT FOR THE USERS - IMPROVEMENT RATE

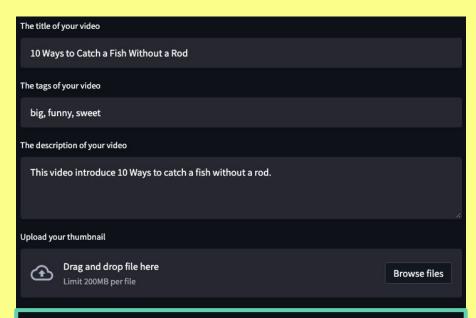

How many percentage of views can increase when compared with blank image, title, tag and description

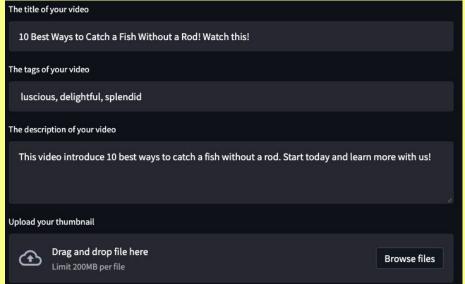

# **WORKFLOW**

# **COMPARE THE TEXT- THE SEQUENCE ALSO MATTERS!**

#### Video Improvement Rate: -15%

- The number above shows the increasing percentage of views compared to blank image, title, tag and description.
- You can upload different thumbnails and enter different titles, tags and description to compare the scores of different combinations.

#### Video Improvement Rate: 14%

- The number above shows the increasing percentage of views compared to blank image, title, tag and description.
- You can upload different thumbnails and enter different titles, tags and description to compare the scores of different combinations.

# **COMPARE THE THUMBNAILS - THUMBNAIL MATTERS!**

- The number above shows the increasing percentage of views compared to blank image, title, tag and description.
- You can upload different thumbnails and enter different titles, tags and description to compare the scores of different combinations.

#### **Video Improvement Rate: 264311%**

- The number above shows the increasing percentage of views compared to blank image, title, tag and description.
- You can upload different thumbnails and enter different titles, tags and description to compare the scores of different combinations.

#### **CONCLUSION**

- Not precise enough to provide the number of prediction to the users
- A reference for users to compare their inputs, especially thumbnails

Welcome to try it:

<a href="https://share.streamlit.io/koscew/metis-module7">https://share.streamlit.io/koscew/metis-module7</a> data engineering project/main

# **FUTURE WORK**

More data

- Increase layers and neurons
- More preprocessing (NLP)
- Time Series

UI Optimization

# THANK YOU!

#### **YOUTUBE DATA API**

#### Search

```
"kind": "youtube#searchResult".
"etag": etag /,
"id": {
 "kind": string /.
  "videoId": string /,
  "channelId": string /
  "playlistId": string /
snippet": {
  "publishedAt": datetime /,
  "channelId": string /.
  "title": string /,
  "description": string /,
  "thumbnails": {
    (key) /: {
      "url": string / .
     "width": unsigned integer /,
     "height": unsigned integer /
  "channelTitle": string /,
  "liveBroadcastContent": string /
```

#### Videos

```
"kind": "youtube#video",
"etag": etag /,
"id": string / .
"snippet": {
 "publishedAt": datetime /,
  "channelId": string /,
  title : string / ,
 "description": string /.
 "thumbnails": {
   (key) /: {
      "url": string /.
      "width": unsigned integer /,
      "height": unsigned integer /
  "channelTitle": string /,
  "tags": [
   string /
  "categoryId": string /,
  "liveBroadcastContent": string /,
  "defaultLanguage": string /,
 "localized": {
   "title": string /.
```

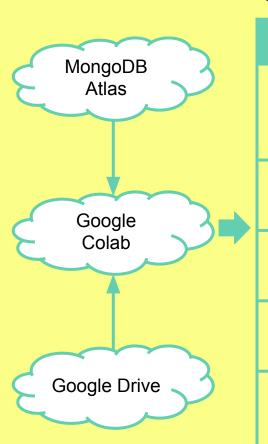

#### Channels

```
"kind": "youtube#channel",
"etag": etag /,
"id": string /,
"snippet": {
  "title": string /.
 "description": string /,
 "customUrl": string /.
  "publishedAt": datetime /.
  "thumbnails": {
    (key) /: {
      "url": string /,
     "width": unsigned integer /,
      "height": unsigned integer /
  "defaultLanguage": string /,
  "localized": {
   "title": string /,
   "description": string /
  "country": string /
"contentDetails": {
  "relatedPlaylists": {
```

#### **AMAZON LAMBDA - DURATION**

## **MODELING - NEURAL NETWORK**

#### **Feature Branches**

#### Numerical and Categorical Video Information

→ One-hot Encoding and Standardization

#### **Thumbnails**

→ Resize, Rescale and Transfer Learning

#### Title

→ NLP, Tokenizer and Embedding

#### Taq

→ NLP, Tokenizer and Embedding

#### **Description**

→ NLP, Tokenizer, Embedding, CNN and Bidirectional LSTM

Target: Log 10 of Daily Views of the Video

**Neural Network** Model

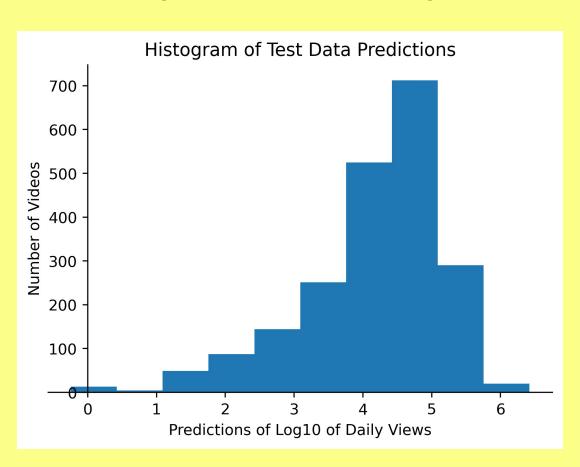

Validation Data

MSE: 1.08 MAE: 0.79

**Test Data** 

MSE: 1.08 MAE: 0.78

## IT CAN BE A REFERENCE

#### **DEPLOY ON STREAMLIT**

- Scaler
- Tokenizers
- Model

Streamlit code on local machine

- Push to Github
- Deploy on streamlit.io
